|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |
|          |     |                 |             |            |             |

Sales Total \_\_\_\_\_

|   |   |
|---|---|
| <b>Sales Order Comments</b><br>1. Shipping of all hardware and software is paid for by the customer<br>2. All DSTR and TSTR units must have a properly rated arrester installed within two feet of the location of the DSTR unit, or within close proximity of the TSTR unit.<br>3. If the low threshold current is below 34A for the DSTR unit, or is below 100A for the TSTR unit, then a low threshold current power supply is required.<br>4. The conductor code name, or mm <sup>2</sup> must be listed in all orders.<br>5. Jaw range size may have to be changed if a unit is relocated.<br>6. Voltage module may have to be changed if a unit is relocated.<br>7. Customer is responsible for all telecommunications infrastructure and SCADA Integration.<br>8. Customer must specify transmitter/receiver unit using DNP3 protocol.<br>9. Customer must specify system connection type, Delta, or Wye.<br>10. Customer must have a signed license agreement and paid for the software before any hardware is shipped.<br>11. A minimum order of 3 STR units with Powernostics software is required.<br>12. The conductor must be clean before any STR units are installed.<br>13. Any production prototype units require a minimum order of 50 units. | <div style="border: 1px solid black; padding: 5px; text-align: center;"> <b>This Sales Order incorporates Creative Power Systems, Inc.
